PAGE 169-170, ATTACK PHASE

The following option is added:

- ◆ **Launch Mine:** Places a mine in the segment where the ship is located. Roll a normal attack roll and note down the result, which represents how well placed the mine is. No target lock is needed and the roll gets no penalty for this. Place any appropriate marker in the segment to mark where the mine is. When any other ship moves into the segment, the attack from the mine is immediately triggered, directly in the Pilot Phase of the turn. Countermeasures can be used against the mines, see Defensive Fire (this uses up the Gunner's action for the turn however). The ship that launched the mine will not trigger it, nor will other ships already present in the segment. Nuclear mines will damage all ships in the segment, and antimatter mines hit all ships within Short range.

COST: None

PAGE 296, THE TWIN STATION

The last sentence should be completed with:

The only ones with any kind of knowledge about the forgotten parts of the station are the mysterious and reclusive operators, the station's engineer clan, running the ancient life support systems from their homes in the Machine halls. The Machine halls are also off-limits and very few have actually seen an operator.

PAGE 297, THE LEGACY OF THE FOUNDERS

The third and fourth sentences should read:

Studies of ruins and archaeological findings have shown that the Founders were deeply religious and worshipped the Icons, especially the Judge. They were also accomplished scientists and researchers; the many advanced machines they left behind are clear proof of this.
