# Introduction

When role playing, traits and flaws can add so much to an otherwise bland and vanilla character or uninspired NPC.

Things like this can add motivation and give so much more role playing opportunities than the norm. So here we present to you 100 character flaws specially designed to fit into any RPG genre.

You'll find some that are merely quirks to real problems that will cause the need for your GM to ask you to roll for a check or two just to not do something stupid or rash. There are several ways you can implement these flaws in your game, but best done by the GM who is running it (It's their game after all!)

You could roll a D6 or D3 to determine how many to give players, or just give everybody just one. However you choose, best go sparing as many of these could prove deadly in some way or another, leading to dangerous situations and so forth. Either way, they will add an extra level of play to games where a system like this doesn't exist in the rules.

Whatever happens, make sure to enjoy and have a bit of fun with it!!
