2.2	*Laser Communicator	750			

---ANY ITEM MARKED WITH AN "*" IS EXPLAINED ON THE FOLLOWING PAGE---

Hip-Shldr Hvy Flex Extensions:

These are Heavy Flexible attachments for any non-concealed vest that add additional coverage for the wearer. They are PF 9 / BPF 3 protection to “Pelvis”, “Hip Socket”, and “Shoulder Socket” areas from the front only.

“Rhino” Armored Shield:

This is –not- the police riot shield that you see on TV. This is a solid ballistic shield with an armored glass viewport. It covers the front 120-degree arc at PF 9. If standing, it covers from the top of your head to your knees. If kneeling, it covers your entire body. It does require at least 1-hand to use, so only 1-handed fire from it is allowed, and this is usually also “hip-fire” only.

Armored Body Suit:

Manufactured by Eagle Military Gear in TelAviv, Israel. This multi-piece suit has PF 6, BPF 2 coverage Of all the body –except- the head, hands, and ankle-foot areas. It is in no way conceal-able, and is very fatiguing to wear, especially in hot-humid conditions.

Ballistic Face Mask:

Manufactured by American Body Armor and Equipment, USA. It protects the entire face (“Forehead”, “Eye-Nose”, and “Mouth” locations) at PF 6, BPF 1. A hit in the “Eye-Nose” location has a 50% chance to hit the eyeholes, i.e. ignores the PF. All perception/spotting rolls receive a –3 penalty due to poor visibility when worn.

Gyrostabilized Binoculars:

A pair of 10x binoculars with full gyrostabilization build-in. The gyros require 60 seconds to reach operating levels. Batteries are good for ~ 2hours (requires 6 x AA rechargeable). The gyrostabilization will negate up to –6 penalty for spotter movement.

Bulletproof Briefcase:

A normal executive briefcase with custom-fitted steel and synthetic plate in the lid, providing a PF of 20. If held in front of the body it will cover from “Base of Neck” to “Spine” locations.

Laser Communicator:

A set of binoculars with a coded laser and laser receiver which gives an almost undetectable and unjammable communications to another laser communicator. Note that you must know each other’s location and this is a line-of-sight only device. The coded laser pulses are converted into voice and sent out via. An earphone piece. The set has a build-in microphone to pick up your voice transmissions. Maximum range is approximately 1 – 1.5 km, much less in dust/rain/snow, etc...
